STABILO with proconarum

A Tech Milestone: STABILO International's Supplier Query Automation and Compliance Management

CHALLENGES

STABILO International, a prominent manufacturer of writing instruments, faced challenges in managing supplier queries and ensuring conformity declarations for externally sourced materials.

The manual processes in place were time-consuming and posed difficulties in meeting compliance requirements. The need for a streamlined and efficient system became evident as the company sought to enhance its digital transformation journey in conjunction with the S/4 HANA system.

SOLUTION

With conarum's supplier platform, STABILO can create and send supplier queries quickly and easily.

Weissenburg, January 17, 2024 - STABILO International has gone live with conarum's supplier platform today.
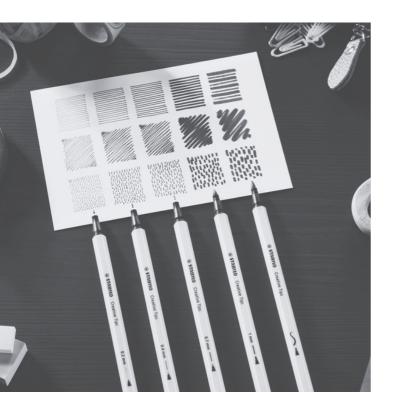

proconarum was integrated into the company's S/4 HANA system and enables STABILO to automate supplier queries and manage declarations of conformity for their externally sourced materials.

The solution supports various types of inquiries such as supplier product or quality inquiries or declarations of conformity.

Supplier responses are recorded in the platform by the supplier and made available for further processing. Suppliers can also upload additional PDF documents, which can then be processed in the subsequent process.

"We are delighted to have reached an important milestone in our digital transformation in conjunction with S/4 HANA with the supplier platform from conarum...The solution helps us to make our processes more efficient and meet our compliance requirements."

from Sarah Eckert, Purchasing at STABILO International.
