Compliance with LKSG and CSDDD – BAFA Reporting

what is prosustain ?

prosustain is a powerful cloud solution developed on the **SAP Business Technology Platform** (SAP BTP) and seamlessly integrated with **SAP S/4HANA**. She supports companies in complying with the requirements of the **LkSG (Supply Chain Due Diligence Act)** and the **CSDDD (Corporate Sustainability Due Diligence Directive)**. prosustain makes it possible to manage risks along the supply chain, implement proactive measures and ensure end-to-end compliance. The most important advantages and functions at a glance:

Risk management and due diligence

prosustain offers companies the opportunity to comprehensively assess risks in their supply chains and take measures to mitigate risks. Through integration into **SAP S/4HANA** and the use of **SAP BTP**, the solution enables a central and automated provision of data that ensures compliance with the human rights and environmental requirements of the **LkSG** as well as the extended consideration of climate protection in accordance with **CSDDD**.

Proactive Activity Management

prosustain contains an activity management system that supports companies in planning and managing proactive measures to comply with due diligence obligations. By integrating suppliers and internal employees, companies can work towards the LkSG and CSDD goals in a targeted manner. This function ensures that risks are identified at an early stage and measures are implemented efficiently and made transparent.

Value chain monitoring

With prosustain, companies can monitor their entire supply chain – from direct and indirect suppliers to downstream business partners. Thanks to the flexible integration of external data providers that provide valuable sustainability information as well as up-to-date data on events and incidents, companies are empowered to make informed decisions and proactively manage risks in the supply chain. Currently, prosustain offers interfaces to the providers everstream and NQC, giving companies direct access to comprehensive, relevant data sources. In addition, other data providers can be seamlessly integrated to best meet the specific needs and needs of each organization.

Reporting and transparency

The solution offers extensive capabilities to generate due diligence reports. These reports can be used for internal purposes as well as for communication with authorities or stakeholders in order to fully comply with the requirements of the LkSG and the CSDDD. In addition, prosustain supports BAFA reporting, which covers the special reporting requirements of the Federal Office of Economics and Export Control (BAFA).

Compliance and documentation

prosustain ensures the complete tracking and documentation of measures required to comply with legal requirements. This includes both human rights and environmental requirements and helps companies minimize civil liability risks, as required by the CSDDD.

The screenshot displays the prosustain Supplier Risk Management interface. On the left, a grid of five modules is shown: Activity Management, ESG Incident Management, ESG Audit Management, ESG Risk Overview, and Sustainability Main BAFA Report. Each module has a small icon below its name. On the right, a red banner contains the text 'Package Introduction' and 'How it looks'. Below this, a white box titled 'Explore The Feature' lists five key capabilities: Keep track of CSR development, Pinpoint low-rated suppliers, Conduct countermeasure activities, Reduce manual effort in sustainability reporting, and Integrate external data providers. At the bottom left, the SAP Certified logo is visible, along with the text 'Integration with RISE with SAP S/4HANA Cloud' and '© conarum Company Ltd 2025 – All Rights Reserved'.

Package Introduction

How it looks

Explore The Feature

- **Keep track of CSR development** over time and use filters to deep-dive into different score types.
- **Pinpoint low-rated suppliers** that need to be improved before they become high-risk to your supply chain.
- **Conduct countermeasure activities** to remediate high-risk suppliers.
- **Reduce manual effort in sustainability reporting** – share insights easily within the organization and public, and free up time for value-adding tasks.
- **Integrate external data providers** – use external data sources and integrate it via API in your risk score management.

Our Solution

The screenshot displays the 'proconarum ESG Audit Management' interface. On the left, a 'New Incident' form is visible with fields for 'Supplier ID', 'Audit Type', 'Status', 'Valid From', 'Valid To', and 'Audit Label'. Below these are sections for 'Description' and 'Documents'. On the right, a table titled 'Audit Scores (21)' lists various audit records. The table includes columns for 'Supplier ID', 'Supplier Name', 'Audit Type', 'Status', 'Valid From', 'Valid To', 'Audit Score', 'Audit Label', 'Created At', and 'Created By'.

Supplier ID	Supplier Name	Audit Type	Status	Valid From	Valid To	Audit Score	Audit Label	Created At	Created By
